

Canine Head Phantom for intubation training

Price inquiry: +48 605999769, kontakt@openmedis.pl

Product code: MZ02300

The trainer makes it possible to learn and practice correct intubation procedures in dogs. It allows you to acquire appropriate skills before starting work with a live animal. The mannequin has a movable lower jaw, flexible tongue and epiglottis. It has both the trachea and the esophagus, as well as our special index indicating a positive or negative result of the intubation procedure performed. Base with suction cups The suction cup fits most smooth table tops and provides adequate stability during training.

Specification:

- Dog head made of rubber, washable material
- Flexible jaw and tongue
- Table holder with suction cups
- Adjustable head tilt angle
- A measure that shows the effectiveness of the performed procedure

- the kit includes: dog head with handle, one endotracheal tube for intubation (approx. 24cm), syringe, combing brush, balloons, disinfectant lubricant, protective carrying case

Manikin for learning the technique of intubation in dogs with brachycephaly

Price inquiry: +48 605999769, kontakt@openmedis.pl

Product code: MZ02555

The brachycephalic intubation model helps in learning to navigate the mouth and airways of dogs with brachycephaly (short muzzle), helping to improve the real-world ability to perform intubation surgery. The trainer is anatomically correct, has a functional jaw, a stretchy tongue and a precisely made throat (epiglottis, trachea, soft palate, etc.). The entire throat area is visible from the back, so accuracy can be checked during the procedure. The intubation model also comes with 4 mounting brackets for mounting on a tripod or any other device of your choice.

Canine intubation model

Price inquiry: +48 605999769, kontakt@openmedis.pl

Product code: MZ02549

The dog intubation model helps in learning to navigate the dog's mouth and airways, helping to improve the ability to perform intubation surgery in real life situations. The phantom is anatomically correct, has a functional jaw, a stretchy tongue and precisely made pharynx (epiglottis, trachea, soft palate, etc.). The entire throat area is also visible from the back, so the teacher can check accuracy during the procedure. The intubation model also comes with 4 mounting brackets for mounting on a tripod or any other device of your choice.

Canine intubation head trainer

Price inquiry: +48 605999769, kontakt@openmedis.pl

Product code: AM02669

This realistic training phantom is ideal for practicing tracheal intubation procedures and techniques.

The tongue is flexible and the teeth are made of hard plastic so you can also use a retractor. Elements such as the epiglottis and the soft palate are visible. The dog's head is mounted on a tripod, which is designed in such a way that it can be intubated in both standing and lying positions. The trainer also allows you to check if the intubation was performed correctly.

The supplied clamp ensures a stable base.
