

s.c. Pad

Price inquiry: +48 605999769, kontakt@openmedis.pl

Product code: MZ03919

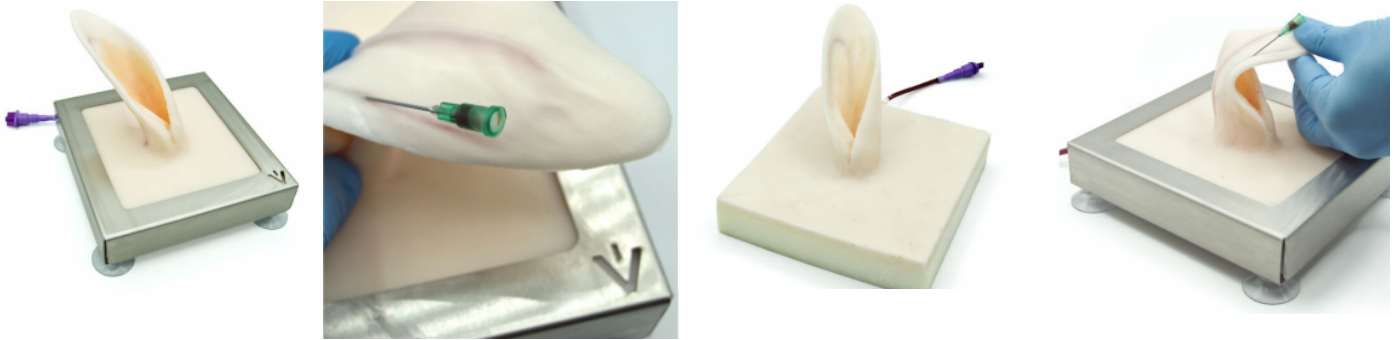

This true-to-life s.c. pad provides opportunity to practice subcutaneous injection in dogs and cats.

This three-layer injection pad enables the lifting of a skin fold through the simulated subcutis. Practising subcutaneous injections is thus possible under realistic conditions. Our injection pads are reusable, tear-resistant and retain their shape and texture even after repeated use. Our practical pad holder (S) can be used to mount the injection pad in a vertical or a horizontal position, as required. Pad holder is not included in the scope of delivery and has to be ordered separately. **dimensions: ca. 15 x 16 cm thickness: ca. 3 cm layers: cutis, subcutis, muscle layer**

Rabbit V. auricularis

Price inquiry: +48 605999769, kontakt@openmedis.pl

Product code: MZ03912

Blood collection - rabbit

This flexible rabbit ear allows training of blood sampling as well as application of a venous catheter to the auricular vein.

The soft and flexible rabbit ear has an integrated vein tube, which allows training of injection techniques on the auricular vein in a lifelike manner. With the connection of our blood bag, the training of blood sampling and the application of a venous catheter with direct control of success is possible. Our ears can be used several times after puncture, are tear-resistant and retain their shape and texture even after repeated use. For practical handling, we recommend the pad holder (S), with which the rabbit ear can be attached in a vertical or horizontal position, as required. Pad holder and blood bag are not included in the scope of delivery and has to be ordered separately. dimensions: ca. 15 x 16 cm thickness: ca. 3 cm vein: 0,4 cm Ø

Cow - V. auricularis

Price inquiry: +48 605999769, kontakt@openmedis.pl

Product code: MZ03914

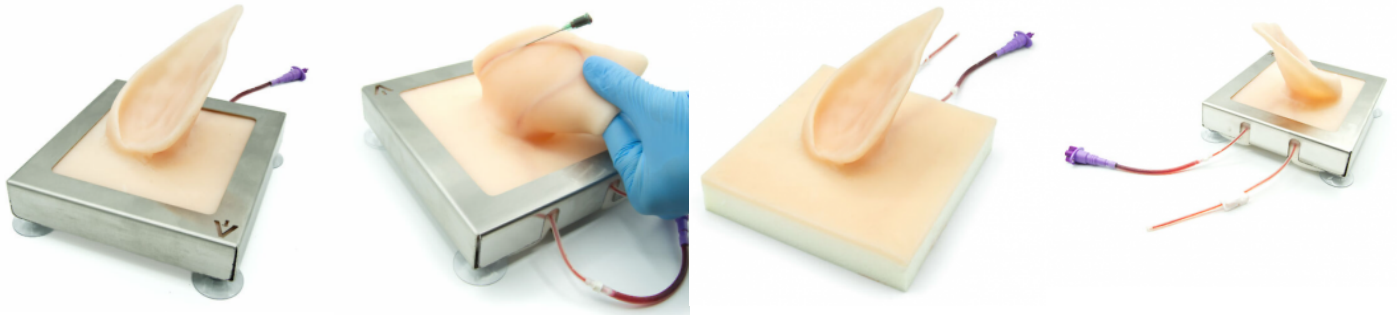

Vein catheter - Cow The soft and flexible bovine ear has an integrated vein tube, which allows training of injection techniques on the auricular vein in a lifelike manner. With the connection of our blood bag, the training of blood sampling and the application of a venous catheter with direct control of success is possible. Our ears can be used several times after puncture, are tear-resistant and retain their shape and texture even after repeated use. For practical handling, we recommend the pad holder (S), with which the cow ear can be attached in a vertical or horizontal position, as required. Pad holder and blood bag are not included in the scope of delivery and has to be ordered separately.

Pig - V. auricularis

Price inquiry: +48 605999769, kontakt@openmedis.pl

Product code: MZ03913

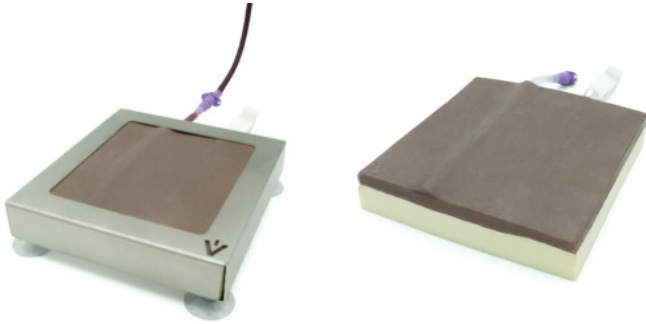

Vein catheter - pig The soft and flexible pig ear has an integrated vein tube, which allows training of injection techniques on the auricular vein in a lifelike manner. With the connection of our blood bag, the training of blood sampling and the application of a venous catheter with direct control of success is possible. Our ears can be used several times after puncture, are tear-resistant and retain their shape and texture even after repeated use. For practical handling, we recommend the pad holder (S), with which the pig ear can be attached in a vertical or horizontal position, as required. Pad holder and blood bag are not included in the scope of delivery and has to be ordered separately. dimensions: ca. 15 x 16 cm thickness: ca. 3 cm vein: 0,4 cm Ø

Blood collection pad - large animal

Price inquiry: +48 605999769, kontakt@openmedis.pl

Product code: MZ03917

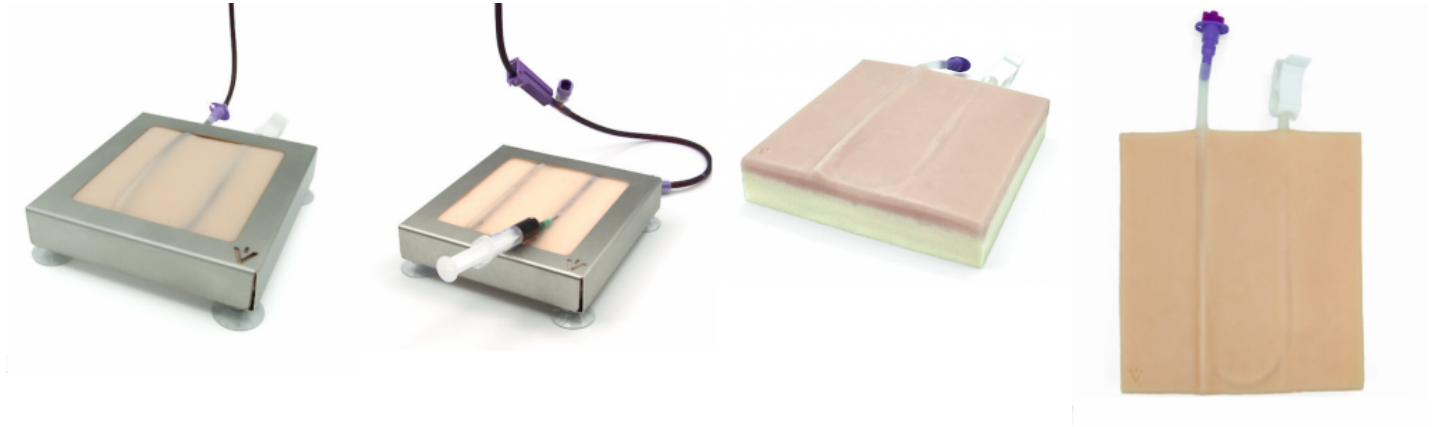

This life-like blood collection pad provides opportunity to practice blood sampling and venous catheterisation in large animals.

This blood collection pad has two integrated venae cavae, perfectly mimicking the characteristics of subcutaneous blood vessels. The two veins simulate different levels of blood stasis and thus allow training at various levels of difficulty, as is often the case in real-life conditions. Our blood collection pads are reusable, tear-resistant and retain their shape and texture even after repeated use. Our practical pad holder (S) can be used to mount suture pads in a vertical or a horizontal position, as required. Pad holder and Instruments are not included in the scope of delivery and has to be ordered separately. dimensions: ca. 15 x 16 cm thickness: ca. 3 cm vein: 0,9 cm Ø

Blood collection pad - small animal

Price inquiry: +48 605999769, kontakt@openmedis.pl

Product code: MZ03916

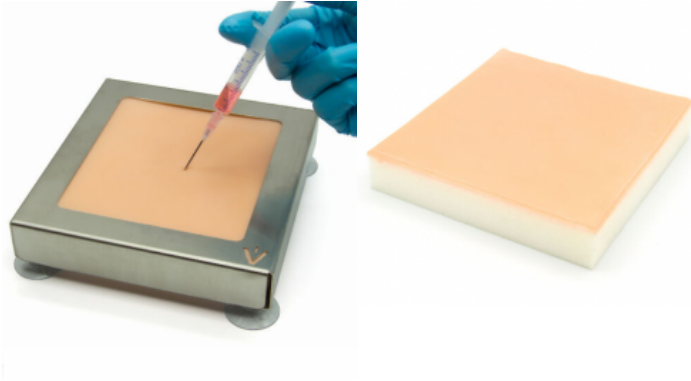

This life-like blood collection pad provides opportunity to practice blood sampling and venous catheterisation in small animals.

This blood collection pad has two integrated venae cavae, perfectly mimicking the characteristics of subcutaneous blood vessels. The two veins simulate different levels of blood stasis and thus allow training at various levels of difficulty, as is often the case in real-life conditions. Our blood collection pads are reusable, tear-resistant and retain their shape and texture even after repeated use. Our practical pad holder (S) can be used to mount suture pads in a vertical or a horizontal position, as required. Pad holder and Instruments are not included in the scope of delivery and has to be ordered separately. dimensions: ca. 15 x 16 cm thickness: ca. 3 cm vein: 0,4 cm Ø

i.m. Pad

Price inquiry: +48 605999769, kontakt@openmedis.pl

Product code: MZ03918

This true-to-life i.m. pad provides opportunity to practice intramuscular injection in dogs and cats.

This two-layer injection pad has a skin-like surface and a simulated muscle layer into which smaller injection volumes can be applied. This makes it possible to practise intramuscular injections under realistic conditions. Our injection pads are reusable, tear-resistant and retain their shape and texture even after repeated use. Our practical pad holder (S) can be used to mount the injection pad in a vertical or a horizontal position, as required. Pad holder is not included in the scope of delivery and has to be ordered separately. dimensions: ca. 15 x 16 cm thickness: ca. 3 cm

Blood bag

Price inquiry: +48 605999769, kontakt@openmedis.pl

Product code: MZ03920

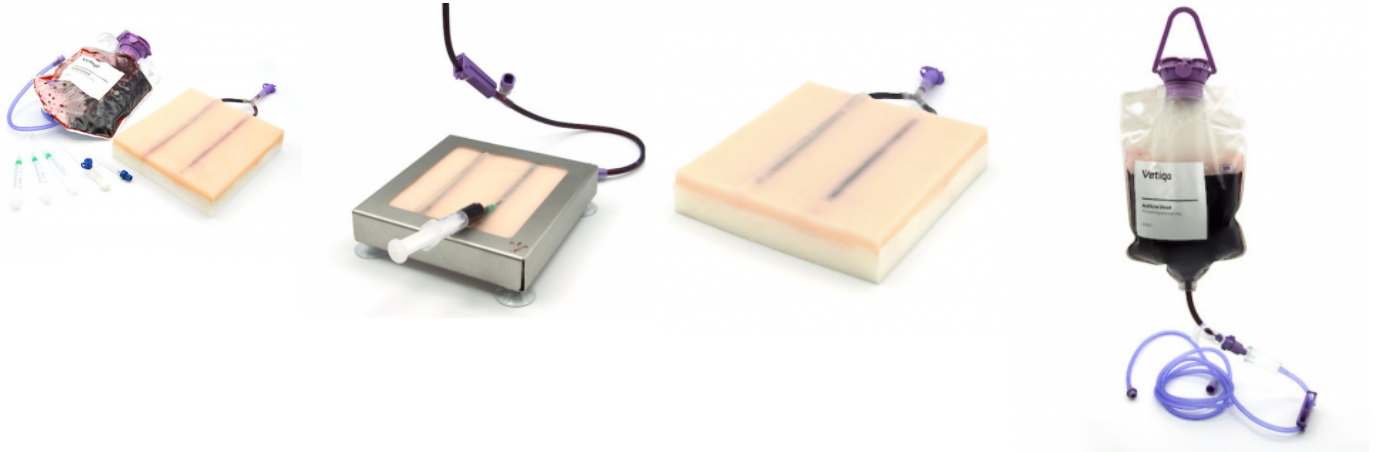

This blood bag with fake blood brings our blood collection pads to life!

This blood bag provides a true-to-life representation in consistency and color and provides learners with an immediate means of checking results in intravenous injections or blood sampling. The blood is delivered in a practical donor bag with a quick-release fastener and a roller clamp for optimal dosage of the blood flow. All blood bags include corresponding connector pieces to allow for easy attachment to blood collection pads and other simulators. quantity: 500ml

Extension Set - Injection skills

Price inquiry: +48 605999769, kontakt@openmedis.pl

Product code: MZ03915

As an extension to our basic and advanced suture sets, this set offers the optimal complement for the advanced training of injections, blood sampling and the placement of vein catheters.

In addition to a blood collection pad and blood bag, this extension set also includes all needed accessories for your training of blood sampling, thus providing a practical supplement to our Basic and Advanced suture sets. This IV pad consists of two veins, perfectly mimicking the characteristics of subcutaneous blood vessels. The two veins simulate different levels of blood stasis and thus allow training at various levels of difficulty, as is often the case in real-life conditions. Our IV pads are reusable, tear-resistant and retain their shape and texture even after repeated use. Pad holder is not included in the scope of delivery. Content

- Blood collection pad
- Blood bag
- 3 x syringe
- 3 x cannula
- 1 x vein catheter

dimensions: ca. 15 x 16 cm artificial blood: ca. 200 ml accessories: 3 x syringe, 3 x cannula, 1 x vein catheter
