

X-Ray Phantom Spine, opaque

Price inquiry: +48 605999769, kontakt@openmedis.pl

Product code: SM01149

A vertebral column phantom designed for performing X-ray photography. The following bones were embedded in the nontransparent material:

- Cervical, thorax, lumbar, sacral vertebrae
- Sacrum

Main features:

- Phantom contains real bones, which allows you to take real X-ray pictures
- It allows you to perform multiple x-rays without any side effects.
- Each model is made by hand and individually, which makes it unique, may contain some pathologies and vary in shape and size depending on the type of skeletal structure.
- The individual bone structures are assembled without metal elements.
- The bones were embedded in a special material that did not cause image artifacts.

Additional information:

- The phantom is delivered with a protective case
- It provides excellent conditions for learning radiology.
- Also available in transparent version

Application:

- Perform X-rays photos in various positions
