

Pelvis for demonstration of birth canal

Price inquiry: +48 605999769, kontakt@openmedis.pl

Product code: MA01207

- With this model birth canal and the passage of the fetal head through the female pelvis during labour can be clearly demonstrated.
-

The pelvic skeleton consists of flexible hip bones with movably mounted symphysis, sacrum with flexible coccyx and 2 lumbar vertebrae.

- The foetal skull is mounted with a flexible spiral rod on the base and can be moved freely.
