

## Heart and lungs auscultation simulator

**Price inquiry:** +48 605999769, [kontakt@openmedis.pl](mailto:kontakt@openmedis.pl)

Product code: SM02004

Full-size adult torso with a head and noticeable landmarks. Designed for learning to auscultate the sounds of the heart and lungs. Along with the phantom, the set includes a dedicated Virtual Stethoscope and sound markers mounted under the surface of the phantom's skin. The markers are located in 13 places: 9 on the front side of the chest and 4 on the back. The virtual stethoscope has an on / off button and a sound switching button. There are blue points on the torso that indicate the location of the marker. The points can be removed, and the chest and back skin can be removed to locate the blue points. Each sound marker is responsible for generating a different sound in the stethoscope during auscultation. External speakers can be connected to the phantom, which enable group auscultation training.

Set contains:

- adult torso
- virtual stethoscope
- set of external speakers
