

## Breast examination model

**Price inquiry:** +48 605999769, [kontakt@openmedis.pl](mailto:kontakt@openmedis.pl)

Product code: SM02259

The breast examination simulator is used to teach and practice breast palpation techniques. It is an excellent model for hospitals and medical clinics for use in teaching women the right breast examination techniques. Special leather provides a realistic look. A unique feature of this simulator is realistic fluid breast mass. This mass allows the displacement of breast tissue under palpation almost exactly as it does in a live patient. Each breast contains irregularities. The left one has a small lump in the upper outer quarter and fibroma in the lower inner quarter. The right breast has a solid lump in the upper outer quarter and a fluid-filled cyst in the lower inner quarter. The simulator allows women to practice all phases of breast examination both in a sitting position and on the back. This lightweight simulator is designed with a concave back to allow it to be applied to a patient to facilitate demonstration or practice of touch techniques. Can be used as a body cap or attached to the body standing up.

### Set contains:

- manual user instructions
- American Cancer Society guide for breast screening
- storage box
- neck strap (90cm) and waist strap (120cm) that are adjustable and can be clipped on

### specifications:

- weight: approx. 3 kg
