

Single breast trainer

Price inquiry: +48 605999769, kontakt@openmedis.pl

Product code: SM02260

The single breast test simulator has been designed for use in education in the prevention of breast cancer and breast self-examination. Breast self-examination is an important way to detect cancer at an early, easier-to-treat stage. The soft, realistic simulated breast tissue fits on a solid base with profiled ribs. Interchangeable papules and nodules of various sizes, shapes and densities can be placed in the breast in any combination, offering a full educational experience.

Set contains:

- four soft bumps (skin-colored) that are normal tissue
- three medium (white) papules
- four hard (red) papules
- baby powder
- soft case
- instruction sheet

Papules and nodules vary in size from 1-3 cm, are round and have an irregular shape, indicating both cysts and malignant tumors.
