

AMAZONKA Right Hand Lymphatic Drainage Kit 6-chamber CarePump Lite6 + 1 cuff for right hand, shoulder and chest

Price inquiry: +48 605999769, kontakt@openmedis.pl

Product code: SR03554

CarePump LITE6 is a device that allows you to set basic parameters (pressure, treatment time, chamber filling rate, operating mode) especially recommended for home use. For professional use, we recommend choosing the Advanced series device, which offers a wider range of treatment settings and supports cuffs with a larger number of chambers, e.g. the 8-chamber CarePump EXPERT8 .

Intended use:

- physical treatment of post-traumatic conditions,
- prevention of circulatory and lymphatic system failure,
- diseases causing swelling,
- lymphatic insufficiency after mastectomy,
- feeling of "heavy legs",
- cellulite,
- exudates,
- prevention and prophylaxis in the treatment of obesity and overweight,
- past infectious diseases (in order to strengthen the body and remove toxins),
- accelerating the absorption of hematomas or bruises by stimulating microcirculation.

Technical data

- Supported cuffs: 6-chamber
- Cuff type: overlapping, fishbone
- Pressure: 20-220mmHg
- Number of treatment programs: 6
- Treatment time: 1-120 minutes
- Possibility to turn off the chambers: YES
- Treatment rate adjustment: 1-5
- Display: 5" color touch screen
- Dimensions: 300x260x160mm
- Weight: 2.8 kg

Advantages of the Lite6 camera

- Actual cuff pressure measurement
- The device, as one of the few on the market, has the function of real pressure measurement in the cuff, thanks to which the pressure set on the device corresponds to the pressure on the patient's body, regardless of the size of the limb and the width of the cuff.
- Certificate of the Polish Lymphological Society
- The device is accredited by a medical organization associating specialists in the field of anticongestive

therapy.

- Polish production and service
- Polish production of the camera, taking into account the needs of specialists at the device design stage. Service located in Krakow with quick handling of requests.
- 6 operating modes - treatment algorithms
- The device has 6 operating modes (methods of cuff inflation) developed by the Polish Lymphological Society, including: fatty edema, regeneration, prophylaxis, lymphedema.
- Precise parameter adjustment
- The device allows very precise adjustment of parameters to 1 mmHg in the case of setting pressure, or 1 min in time settings.
- Possibility to turn off individual chambers
- A function that is particularly desirable in the case of certain diseases and injuries. It allows you to exclude any chamber from the procedure (no pumping).
- Overlapping cuffs
- A system of overlapping chambers has been used in the cuffs, which prevents the lymph from flowing back during the procedure, making it more effective.
- Low volume
- Quiet operation, conducive to relaxation, allowing you to talk freely or watch TV.
- Emergency air extraction from all chambers in the model
- It is possible to buy a safety button that allows emergency interruption of the procedure.

Kit Contents:

LITE6 6-chamber pressotherapy apparatus, power supply, cuff for the right hand, shoulder and chest 1 pc.

A wide range of cuffs:

Additionally, you can buy:

- left leg cuff
- right leg cuff
- splitter (in case you want to connect two cuffs to the device at the same time)
- short pants cuff
- cuff - belt for hips and belly
- Cuff - long pants, 6-chamber
- Cuff for the left hand, shoulder, chest, 6-chamber
