

A basic phantom for teaching breast examination

Price inquiry: +48 605999769, kontakt@openmedis.pl

Product code: SM03594

The vest phantom is a highly realistic learning aid that helps you learn the skills required for clinical breast examination. Equipped with 6 easily replaceable and multi-position modules simulating pathological conditions, enabling learning to identify various complications and diseases, including cancers, cysts, mastopathy and fibroadenoma.

The phantom on a simulated patient can be used for any training to prepare for the OSCE Objective Structured Clinical Exam or training for healthcare professionals promoting the ability to use optimal examination techniques among trainees and patients. Skills

- Clinical breast examination
- Breast self-examination
- Identification of anatomical landmarks
- Location and diagnosis of pathological changes
- Communication between a medical worker and a patient

Basic features

- The pathology modules can be placed in various fixed locations and are very easy to replace
- The vest can be used on a simulated patient
- The vest can be worn comfortably for a long time during OSCE exam preparation classes and the exam itself
- Made of soft material, the breasts are realistic in appearance and touch
- Skin surfaces can be washed with soap and water
- Does not contain latex

Anatomy

- Anatomical breast with realistic soft tissue reconstruction
- Pathology modules: neoplasms 2 cm, 3 cm, 5 cm, cysts, mastopathy, fibroadenoma
