

## Hip Surgical Simulator (Standard model)

**Price inquiry:** +48 605999769, [kontakt@openmedis.pl](mailto:kontakt@openmedis.pl)

Product code: SM03756

The Hip Trainer came to meet the needs of surgical education services, allowing the study of the best access and puncture techniques to teaching joint triangulation, treatment of hip stabilization, use of anchors, sutures, fixators and prostheses and so much more. Considering the impossibility of using people or cadavers in the training phase of new surgeons, with Hip Trainer the teaching options are multiple and placed into growing difficulty levels, also allowing open surgery after arthroscopy. The presence of skin, fat, muscles, nerves, vessels and bones enables a complete training with the real anatomy of hip and leg pathologies. Lateral and anterior accesses can be made when implanting prostheses, while the use of real instruments provides the ideal environment for teaching.

Components/Optional:

- Reusable support
- Surgical Unit
